4.5.4: Intercultural Communication

Learning Objectives

1. Define intercultural communication.
2. List and summarize the six dialectics of intercultural communication.
3. Discuss how intercultural communication affects interpersonal relationships.

It is through intercultural communication that we come to create, understand, and transform culture and identity. Intercultural communication is communication between people with differing cultural identities. One reason we should study intercultural communication is to foster greater self-awareness (Martin & Nakayama, 2010). Our thought process regarding culture is often “other-focused,” meaning that the culture of the other person or group is what stands out in our perception. However, the old adage “know thyself” is appropriate, as we become more aware of our own culture by better understanding other cultures and perspectives. Intercultural communication can allow us to step outside of our comfortable, usual frame of reference and see our culture through a different lens. Additionally, as we become more self-aware, we may also become more ethical communicators as we challenge our ethnocentrism, or our tendency to view our own culture as superior to other cultures.

As was noted earlier, difference matters, and studying intercultural communication can help us better negotiate our changing world. Changing economies and technologies intersect with culture in meaningful ways (Martin & Nakayama). As was noted earlier, technology has created for some a global village where vast distances are now much shorter due to new technology that make travel and communication more accessible and convenient (McLuhan, 1967). However, as the following “Getting Plugged In” box indicates, there is also a digital divide, which refers to the unequal access to technology and related skills that exists in much of the world. People in most fields will be more successful if they are prepared to work in a globalized world. Obviously, the global market sets up the need to have intercultural competence for employees who travel between locations of a multinational corporation. Perhaps less obvious may be the need for...
teachers to work with students who do not speak English as their first language and for police officers, lawyers, managers, and medical personnel to be able to work with people who have various cultural identities.

“GETTING PLUGGED IN': THE DIGITAL DIVIDE

Many people who are now college-age struggle to imagine a time without cell phones and the Internet. As “digital natives” it is probably also surprising to realize the number of people who do not have access to certain technologies. The digital divide was a term that initially referred to gaps in access to computers. The term expanded to include access to the Internet since it exploded onto the technology scene and is now connected to virtually all computing (van Deursen & van Dijk, 2010). Approximately two billion people around the world now access the Internet regularly, and those who don’t face several disadvantages (Smith, 2011). Discussions of the digital divide are now turning more specifically to high-speed Internet access, and the discussion is moving beyond the physical access divide to include the skills divide, the economic opportunity divide, and the democratic divide. This divide doesn’t just exist in developing countries; it has become an increasing concern in the United States. This is relevant to cultural identities because there are already inequalities in terms of access to technology based on age, race, and class (Sylvester & McGlynn, 2010). Scholars argue that these continued gaps will only serve to exacerbate existing cultural and social inequalities. From an international perspective, the United States is falling behind other countries in terms of access to high-speed Internet. South Korea, Japan, Sweden, and Germany now all have faster average connection speeds than the United States (Smith, 2011). And Finland in 2010 became the first country in the world to declare that all its citizens have a legal right to broadband Internet access (ben-Aaron, 2010). People in rural areas in the United States are especially disconnected from broadband service, with about 11 million rural Americans unable to get the service at home. As so much of our daily lives go online, it puts those who aren’t connected at a disadvantage. From paying bills online, to interacting with government services, to applying for jobs, to taking online college classes, to researching and participating in political and social causes, the Internet connects to education, money, and politics.

1. What do you think of Finland’s inclusion of broadband access as a legal right? Is this something that should be done in other countries? Why or why not?
2. How does the digital divide affect the notion of the global village?
3. How might limited access to technology negatively affect various nondominant groups?

Intercultural Communication: A Dialectical Approach

Intercultural communication is complicated, messy, and at times contradictory. Therefore it is not always easy to conceptualize or study. Taking a dialectical approach allows us to capture the dynamism of intercultural communication. A dialectic is a relationship between two opposing concepts that constantly push and pull one another (Martin & Nakayama, 2010). To put it another way, thinking dialectically helps us realize that our experiences often occur in between two different phenomena. This perspective is especially useful for interpersonal and intercultural communication, because when we think dialectically, we think relationally. This means we look at the relationship between aspects of intercultural communication rather than viewing them in isolation. Intercultural communication occurs as a dynamic in-betweenness that, while connected to the individuals in an encounter, goes beyond the individuals, creating something unique. Holding a dialectical perspective may be challenging for some Westerners, as it asks us to hold two contradictory ideas simultaneously, which goes against much of what we are taught in our formal
education. Thinking dialectically helps us see the complexity in culture and identity because it doesn’t allow for dichotomies. Dichotomies are dualistic ways of thinking that highlight opposites, reducing the ability to see gradations that exist in between concepts. Dichotomies such as good/evil, wrong/right, objective/subjective, male/female, in-group/out-group, black/white, and so on form the basis of much of our thoughts on ethics, culture, and general philosophy, but this isn’t the only way of thinking (Marin & Nakayama, 1999). Many Eastern cultures acknowledge that the world isn’t dualistic. Rather, they accept as part of their reality that things that seem opposite are actually interdependent and complement each other. I argue that a dialectical approach is useful in studying intercultural communication because it gets us out of our comfortable and familiar ways of thinking. Since so much of understanding culture and identity is understanding ourselves, having an unfamiliar lens through which to view culture can offer us insights that our familiar lenses will not. Specifically, we can better understand intercultural communication by examining six dialectics (Figure \((\text{PageIndex}[1])\)) (Martin & Nakayama, 1999).

The cultural-individual dialectic captures the interplay between patterned behaviors learned from a cultural group and individual behaviors that may be variations on or counter to those of the larger culture. This dialectic is useful because it helps us account for exceptions to cultural norms. For example, earlier we learned that the United States is said to be a low-context culture, which means that we value verbal communication as our primary, meaning-rich form of communication. Conversely, Japan is said to be a high-context culture, which means they often look for nonverbal clues like tone, silence, or what is not said for meaning. However, you can find people in the United States who intentionally put much meaning into how they say things, perhaps because they are not as comfortable speaking directly what’s on their mind. We often do this in situations where we may hurt someone’s feelings or damage a relationship. Does that mean we come from a high-context culture? Does the Japanese man who speaks more than is socially acceptable come from a low-context culture? The answer to both questions is no. Neither the behaviors of a small percentage of individuals nor occasional situational choices constitute a cultural pattern.

The personal-contextual dialectic highlights the connection between our personal patterns of and preferences for communicating and how various contexts influence the personal. In some cases, our communication patterns and preferences will stay the same across many contexts. In other cases, a context shift may lead us to alter our communication and adapt. For example, an American businesswoman may prefer to communicate with her employees in an informal and laid-back manner. When she is promoted to manage a department in her company’s office in Malaysia, she may again prefer to communicate with her new Malaysian employees the same way she did with those in the United States. In the United States, we know that there are some accepted norms that communication in work contexts is more formal than in personal contexts. However, we also know that individual managers often adapt these expectations to suit their own personal tastes. This type of managerial discretion would likely not go over as well in Malaysia where there is a greater emphasis put on power distance (Hofstede, 1991). So while the American manager may not know to adapt to the new context unless she has a high degree of intercultural communication competence, Malaysian managers would realize that this is an instance where the context likely influences communication more than personal preferences.

The differences-similarities dialectic allows us to examine how we are simultaneously similar to and different from others. As was noted earlier, it’s easy to fall into a view of intercultural communication as “other-oriented” and set up dichotomies between “us” and “them.” When we overfocus on differences, we can end up polarizing groups that actually...
have things in common. When we overfocus on similarities, we essentialize, or reduce/overlook important variations within a group. This tendency is evident in most of the popular, and some of the academic, conversations regarding “gender differences.” The book Men Are from Mars and Women Are from Venus makes it seem like men and women aren’t even species that hail from the same planet. The media is quick to include a blurb from a research study indicating again how men and women are “wired” to communicate differently. However, the overwhelming majority of current research on gender and communication finds that while there are differences between how men and women communicate, there are far more similarities (Allen, 2011). Even the language we use to describe the genders sets up dichotomies. That’s why I suggest that my students use the term other gender instead of the commonly used opposite sex. I have a mom, a sister, and plenty of female friends, and I don’t feel like any of them are the opposite of me. Perhaps a better title for a book would be Women and Men Are Both from Earth.

The static-dynamic dialectic suggests that culture and communication change over time yet often appear to be and are experienced as stable. Although it is true that our cultural beliefs and practices are rooted in the past, we have already discussed how cultural categories that most of us assume to be stable, like race and gender, have changed dramatically in just the past fifty years. Some cultural values remain relatively consistent over time, which allows us to make some generalizations about a culture. For example, cultures have different orientations to time. The Chinese have a longer-term orientation to time than do Europeans (Lustig & Koester, 2006). This is evidenced in something that dates back as far as astrology. The Chinese zodiac is done annually (The Year of the Monkey, etc.), while European astrology was organized by month (Taurus, etc.). While this cultural orientation to time has been around for generations, as China becomes more Westernized in terms of technology, business, and commerce, it could also adopt some views on time that are more short term.

The history/past-present/future dialectic reminds us to understand that while current cultural conditions are important and that our actions now will inevitably affect our future, those conditions are not without a history. We always view history through the lens of the present. Perhaps no example is more entrenched in our past and avoided in our present as the history of slavery in the United States. Where I grew up in the Southern United States, race was something that came up frequently. The high school I attended was 30 percent minorities (mostly African American) and also had a noticeable number of white teens (mostly male) who proudly displayed Confederate flags on their clothing or vehicles.
I remember an instance in a history class where we were discussing slavery and the subject of repatriation, or compensation for descendants of slaves, came up. A white male student in the class proclaimed, “I’ve never owned slaves. Why should I have to care about this now?” While his statement about not owning slaves is valid, it doesn’t acknowledge that effects of slavery still linger today and that the repercussions of such a long and unjust period of our history don’t disappear over the course of a few generations.

The privileges-disadvantages dialectic captures the complex interrelation of unearned, systemic advantages and disadvantages that operate among our various identities. As was discussed earlier, our society consists of dominant and nondominant groups. Our cultures and identities have certain privileges and/or disadvantages. To understand this dialectic, we must view culture and identity through a lens of intersectionality, which asks us to acknowledge that we each have multiple cultures and identities that intersect with each other. Because our identities are complex, no one is completely privileged and no one is completely disadvantaged. For example, while we may think of a white, heterosexual male as being very privileged, he may also have a disability that leaves him without the able-bodied privilege that a Latina woman has. This is often a difficult dialectic for my students to understand, because they are quick to point out exceptions that they think challenge this notion. For example, many people like to point out Oprah Winfrey as a powerful African American woman. While she is definitely now quite privileged despite her disadvantaged identities, her trajectory isn’t the norm. When we view privilege and disadvantage at the cultural level, we cannot let individual exceptions distract from the systemic and institutionalized ways in which some people in our society are disadvantaged while others are privileged.

As these dialectics reiterate, culture and communication are complex systems that intersect with and diverge from many contexts. A better understanding of all these dialectics helps us be more critical thinkers and competent communicators in a changing world.
“GETTING CRITICAL”: IMMIGRATION, LAWS, AND RELIGION

France, like the United States, has a constitutional separation between church and state. As many countries in Europe, including France, Belgium, Germany, the Netherlands, and Sweden, have experienced influxes of immigrants, many of them Muslim, there have been growing tensions among immigration, laws, and religion. In 2011, France passed a law banning the wearing of a niqab (pronounced knee-cobb), which is an Islamic facial covering worn by some women that only exposes the eyes. This law was aimed at “assimilating its Muslim population” of more than five million people and “defending French values and women’s rights” (De La Baume & Goodman, 2011). Women found wearing the veil can now be cited and fined $150 euros. Although the law went into effect in April of 2011, the first fines were issued in late September of 2011. Hind Ahmas, a woman who was fined, says she welcomes the punishment because she wants to challenge the law in the European Court of Human Rights. She also stated that she respects French laws but cannot abide by this one. Her choice to wear the veil has been met with more than a fine. She recounts how she has been denied access to banks and other public buildings and was verbally harassed by a woman on the street and then punched in the face by the woman’s husband. Another Muslim woman named Kenza Drider, who can be seen in Video Clip 8.2, announced that she will run for the presidency of France in order to challenge the law. The bill that contained the law was broadly supported by politicians and the public in France, and similar laws are already in place in Belgium and are being proposed in Italy, Austria, the Netherlands, and Switzerland (Fraser, 2011).

1. Some people who support the law argue that part of integrating into Western society is showing your face. Do you agree or disagree? Why?
2. Part of the argument for the law is to aid in the assimilation of Muslim immigrants into French society. What are some positives and negatives of this type of assimilation?
3. Identify which of the previously discussed dialectics can be seen in this case. How do these dialectics capture the tensions involved?
Intercultural Communication and Relationships

Intercultural relationships are formed between people with different cultural identities and include friends, romantic partners, family, and coworkers. Intercultural relationships have benefits and drawbacks. Some of the benefits include increasing cultural knowledge, challenging previously held stereotypes, and learning new skills (Martin & Nakayama, 2010). For example, I learned about the Vietnamese New Year celebration Tet from a friend I made in graduate school. This same friend also taught me how to make some delicious Vietnamese foods that I continue to cook today. I likely would not have gained this cultural knowledge or skill without the benefits of my intercultural friendship. Intercultural relationships also present challenges, however.

The dialectics discussed earlier affect our intercultural relationships. The similarities-differences dialectic in particular may present challenges to relationship formation (Martin & Nakayama, 2010). While differences between people’s cultural identities may be obvious, it takes some effort to uncover commonalities that can form the basis of a relationship. Perceived differences in general also create anxiety and uncertainty that is not as present in intracultural
relationships. Once some similarities are found, the tension within the dialectic begins to balance out and uncertainty and anxiety lessen. Negative stereotypes may also hinder progress toward relational development, especially if the individuals are not open to adjusting their preexisting beliefs. Intercultural relationships may also take more work to nurture and maintain. The benefit of increased cultural awareness is often achieved, because the relational partners explain their cultures to each other. This type of explaining requires time, effort, and patience and may be an extra burden that some are not willing to carry. Last, engaging in intercultural relationships can lead to questioning or even backlash from one’s own group. I experienced this type of backlash from my white classmates in middle school who teased me for hanging out with the African American kids on my bus. While these challenges range from mild inconveniences to more serious repercussions, they are important to be aware of. As noted earlier, intercultural relationships can take many forms. The focus of this section is on friendships and romantic relationships, but much of the following discussion can be extended to other relationship types.

Intercultural Friendships

Even within the United States, views of friendship vary based on cultural identities. Research on friendship has shown that Latinos/as value relational support and positive feedback, Asian Americans emphasize exchanges of ideas like offering feedback or asking for guidance, African Americans value respect and mutual acceptance, and European Americans value recognition of each other as individuals (Coller, 1996). Despite the differences in emphasis, research also shows that the overall definition of a close friend is similar across cultures. A close friend is thought of as someone who is helpful and nonjudgmental, who you enjoy spending time with but can also be independent, and who shares similar interests and personality traits (Lee, 2006).

Intercultural friendship formation may face challenges that other friendships do not. Prior intercultural experience and overcoming language barriers increase the likelihood of intercultural friendship formation (Sias et al., 2008). In some cases, previous intercultural experience, like studying abroad in college or living in a diverse place, may motivate someone to pursue intercultural friendships once they are no longer in that context. When friendships cross nationality, it may be necessary to invest more time in common understanding, due to language barriers. With sufficient motivation and language skills, communication exchanges through self-disclosure can then further relational formation. Research has shown that individuals from different countries in intercultural friendships differ in terms of the topics and depth of self-disclosure, but that as the friendship progresses, self-disclosure increases in depth and breadth (Chen & Nakazawa, 2009). Further, as people overcome initial challenges to initiating an intercultural friendship and move toward mutual self-disclosure, the relationship becomes more intimate, which helps friends work through and move beyond their cultural differences to focus on maintaining their relationship. In this sense, intercultural friendships can be just as strong and enduring as other friendships (Lee, 2006).

The potential for broadening one’s perspective and learning more about cultural identities is not always balanced, however. In some instances, members of a dominant culture may be more interested in sharing their culture with their intercultural friend than they are in learning about their friend’s culture, which illustrates how context and power influence friendships (Lee, 2006). A research study found a similar power dynamic, as European Americans in intercultural friendships stated they were open to exploring everyone’s culture but also communicated that culture wasn’t a big part of their intercultural friendships, as they just saw their friends as people. As the researcher states, “These types of responses may demonstrate that it is easiest for the group with the most socioeconomic and socio-cultural power to ignore the rules, assume they have the power as individuals to change the rules, or assume that no rules exist, since
others are adapting to them rather than vice versa” (Collier, 1996). Again, intercultural friendships illustrate the complexity of culture and the importance of remaining mindful of your communication and the contexts in which it occurs.

**Culture and Romantic Relationships**

Romantic relationships are influenced by society and culture, and still today some people face discrimination based on who they love. Specifically, sexual orientation and race affect societal views of romantic relationships. Although the United States, as a whole, is becoming more accepting of gay and lesbian relationships, there is still a climate of prejudice and discrimination that individuals in same-gender romantic relationships must face. Despite some physical and virtual meeting places for gay and lesbian people, there are challenges for meeting and starting romantic relationships that are not experienced for most heterosexual people (Peplau & Spalding, 2000).

As we’ve already discussed, romantic relationships are likely to begin due to merely being exposed to another person at work, through a friend, and so on. But some gay and lesbian people may feel pressured into or just feel more comfortable not disclosing or displaying their sexual orientation at work or perhaps even to some family and friends, which closes off important social networks through which most romantic relationships begin. This pressure to refrain from disclosing one’s gay or lesbian sexual orientation in the workplace is not unfounded, as it is still legal in twenty-nine states (as of November 2012) to fire someone for being gay or lesbian (Human Rights Campaign, 2012). There are also some challenges faced by gay and lesbian partners regarding relationship termination. Gay and lesbian couples do not have the same legal and societal resources to manage their relationships as heterosexual couples; for example, gay and lesbian relationships are not legally recognized in most states, it is more difficult for a gay or lesbian couple to jointly own property or share custody of children than heterosexual couples, and there is little public funding for relationship counseling or couples therapy for gay and lesbian couples.

While this lack of barriers may make it easier for gay and lesbian partners to break out of an unhappy or unhealthy relationship, it could also lead couples to termination who may have been helped by the socio-legal support systems available to heterosexuals (Peplau & Spalding, 2000).

Despite these challenges, relationships between gay and lesbian people are similar in other ways to those between heterosexuals. Gay, lesbian, and heterosexual people seek similar qualities in a potential mate, and once relationships are established, all these groups experience similar degrees of relational satisfaction (Peplau & Spalding, 2000). Despite the myth that one person plays the man and one plays the woman in a relationship, gay and lesbian partners do not have set preferences in terms of gender role. In fact, research shows that while women in heterosexual relationships tend to do more of the housework, gay and lesbian couples were more likely to divide tasks so that each person has an equal share of responsibility (Peplau & Spalding, 2000). A gay or lesbian couple doesn’t necessarily constitute an intercultural relationship, but as we have already discussed, sexuality is an important part of an individual’s identity and connects to larger social and cultural systems. Keeping in mind that identity and culture are complex, we can see that gay and lesbian relationships can also be intercultural if the partners are of different racial or ethnic backgrounds.

While interracial relationships have occurred throughout history, there have been more historical taboos in the United States regarding relationships between African Americans and white people than other racial groups. Antimiscegenation laws were common in states and made it illegal for people of different racial/ethnic groups to marry. It wasn’t until 1967
that the Supreme Court ruled in the case of *Loving versus Virginia*, declaring these laws to be unconstitutional (Pratt, 1995). It wasn’t until 1998 and 2000, however, that South Carolina and Alabama removed such language from their state constitutions (Lovingday.org, 2011). The organization and website lovingday.org commemorates the landmark case and works to end racial prejudice through education.

![Figure 8.3.2N](https://biz.libretexts.org/Sandboxes/jhalpern/BMT_2720%3A_Managing_Workplace_Diversity_(Perry)/04%3A_Communicatio...

Even after these changes, there were more Asian-white and Latino/a-white relationships than there were African American–white relationships (Gaines Jr. & Brennan, 2011). Having already discussed the importance of similarity in attraction to mates, it’s important to note that partners in an interracial relationship, although culturally different, tend to be similar in occupation and income. This can likely be explained by the situational influences on our relationship formation we discussed earlier—namely, that work tends to be a starting ground for many of our relationships, and we usually work with people who have similar backgrounds to us.

There has been much research on interracial couples that counters the popular notion that partners may be less satisfied in their relationships due to cultural differences. In fact, relational satisfaction isn’t significantly different for interracial partners, although the challenges they may face in finding acceptance from other people could lead to stressors that are not as strong for intracultural partners (Gaines Jr. & Brennan, 2011). Although partners in interracial relationships certainly face challenges, there are positives. For example, some mention that they’ve experienced personal growth by learning about their partner’s cultural background, which helps them gain alternative perspectives. Specifically, white people in interracial relationships have cited an awareness of and empathy for racism that still exists, which they may not have been aware of before (Gaines Jr. & Liu, 2000).

**KEY TAKEAWAYS**

- Studying intercultural communication, communication between people with differing cultural identities, can help us gain more self-awareness and be better able to communicate in a world with changing demographics and technologies.
- A dialectical approach to studying intercultural communication is useful because it allows us to think about culture and identity in complex ways, avoiding dichotomies and acknowledging the tensions that must be negotiated.
- Intercultural relationships face some challenges in negotiating the dialectic between similarities and differences but can also produce rewards in terms of fostering self- and other awareness.

**EXERCISES**

1. Why is the phrase “Know thyself” relevant to the study of intercultural communication?
2. Apply at least one of the six dialectics to a recent intercultural interaction that you had. How does this dialectic help you understand or analyze the situation?
3. Do some research on your state’s laws by answering the following questions: Did your state have antimiscegenation laws? If so, when were they repealed? Does your state legally recognize gay and lesbian relationships? If so, how?
